Executive Summary

Beginning in August 2014, Livingston County embarked on a 15-month process to develop a community-wide strategic plan to improve the health and well-being of the county. The six-phase Mobilizing for Action through Planning and Partnership (MAPP) model, developed by the National Association of County and City Health Officials (NACCHO) and the Centers for Disease Control and Prevention (CDC) Public Health Program Practice Office, was selected for this process and was facilitated by the Livingston County Department of Public Health (LCDPH). The MAPP model provided a comprehensive approach to improving the health and quality of life of Livingston County residents through community-wide and community-driven strategic planning. The results of the completed MAPP process provide the foundation for the 2015-2020 Livingston County Community Health Improvement Plan (CHIP). The CHIP is a long-term, systematic plan to address public health issues identified during the MAPP process. The CHIP is a community-owned plan that outlines actions to be taken by our local public health system to improve the health of Livingston County in ten strategic issue areas listed below in impact order:

1. Substance Abuse
2. Health Education / Promotion
3. Mental Health
4. Healthcare Integration
5. Communication
6. Dental Health
7. Chronic Disease
8. Transportation
9. Affordable Housing
10. Sexually Transmitted Diseases / Infections
Livingston County, MI: An Overview

Located in Southeast Michigan, Livingston County is bordered by Washtenaw County (Ann Arbor) to the South and Genesee County (Flint) and Shiawassee County to the North. It is bordered by Oakland County on the East and Ingham County (Lansing) on the West. Livingston County is one of Michigan’s fastest growing counties, recording a 15% growth in population between 2000 and 2010. The 185,596 residents recorded in the 2014 Census are projected by the Southeast Michigan Council of Governments (SEMCOG) to grow to 214,000 by 2035. Livingston County is also the wealthiest county in the state of Michigan.

The county encompasses a land area of 585 square miles that includes a blend of suburban and rural settings. Notably, Livingston County has over 160 natural lakes. The county also is home to 20,000 acres of parkland located in 10 parks. In addition to local parks, there are four state parks/recreation areas and two Metroparks in Livingston County.

During the last 40 years, Livingston County has changed from a rural community to a suburban community. Between 1982 and 2008 the number of farms and acreage of land being farmed both decreased nearly 30%.

Located between Detroit and Lansing and between Ann Arbor and Flint, Livingston County benefits by being at the crossroads of commerce, as well as providing families looking for a more rural setting for residence with access to interstate highways. This is exemplified by the fact that less than one-half, 42.5%, of employed Livingston County residents work in Livingston County.

Livingston County, along with the rest of Michigan, is increasingly aging as the baby boomers reach the retirement years. Between 2000 and 2010, the number of Livingston County residents age 65 years and older increased by 66%, growing from 13,037 to 21,644 residents. During the last decade, the age 65 years and older population grew from 8.3% to 12% of the total county population.
The MAPP Process

The MAPP process was selected to guide Livingston County through the completion of the CHIP because of its heavy emphasis on strengthening the entire local public health system, as well as its use of community input and fostering collaboration between partners within the public health system. MAPP is a six-phase process, which Livingston County began in August 2014 and completed in November 2015. Comprehensive reports detailing each of the six phases of the Livingston County MAPP process are available online at https://www.livgov.com/health/Pages/publications.aspx under the header Mobilizing for Action Through Planning & Partnerships (MAPP) Team Publications.

Phase 1: Organize for Success / Partnership Development

Beginning in August 2014, LCDPH began to identify and recruit key stakeholders within the community to participate in the MAPP process and to form the MAPP Team. The goal of this first phase was to build commitment and foster engagement from community participants, educate the community about the purpose and importance of the MAPP process, and developing a realistic plan to execute the MAPP process. In total, more than 65 participants committed to being a part of the MAPP team and represented all sectors of the county and community from health and human service agencies, to local and state government, hospitals, and residents.

Phase 2: Visioning

The Visioning phase involved the creation of a community-wide vision and adoption of community values during the November 2014 MAPP Team meeting. The MAPP Team created a community vision through an agreed understanding of what a healthy community looks like. The community vision offers a picture of the long-term outcomes of the MAPP process and what will be achieved when the goals and strategies are implemented. Additionally, the MAPP Team developed a set of community values that represent the guiding principles and behaviors envisioned for our community that are meant to help achieve the vision.

Community Vision Statement
A safe, healthy, educated, and supportive community in which all individuals can attain optimal physical, cultural, social, mental, and spiritual health.

Phase 3: The Four MAPP Assessments

The third phase is comprised of four individual assessments that make up the core of the MAPP process. Phase three was conducted over a span of four months from February to May 2015. During this phase a variety of qualitative and quantitative data was collected and offered insight into the opportunities and challenges throughout Livingston County.

Community Themes and Strengths Assessment (CTSA) focused on providing an in-depth understanding of the issues residents viewed as important to the community through the collection of thoughts, opinions, and perceptions of community members and key stakeholders. The CTSA collected qualitative data that created a picture of the health and quality of life of the community as viewed by its residents and answered the questions “What is important to our community?”, “How is our community’s health perceived by our residents?”, and “What assets do we have that can be used to improve our community’s health?”

Local Public Health System Assessment (LPHSA) sought to answer the questions “What are the components, activities, competencies, and capacities of our local public health system?” and “How well are the 10 Essential Public Health Services being provided to our community?” To answer these questions the MAPP Team completed the National Public Health Performance Standards (NPHPS) Local Assessment Instrument developed by NACCHO and the CDC. The NPHPS Local Assessment Instrument allowed the MAPP Team to assess the capacity and performance of the public health system and public health governing bodies in Livingston County. At the completion of this assessment the MAPP team identified the strengths and weaknesses in the ability of the local public health system to deliver the 10 Essential Public Health Services.

Forces of Change Assessment (FOCA) identified forces – trends, factors, and events – that are occurring or might occur in the future that could influence the health and quality of life of the community or that impact the work of the local public health system in Livingston County. The MAPP Team completed a Strengths, Weaknesses, Opportunities, and Threats (SWOT) analysis to provide a comprehensive assessment of current or potential forces of change and the possible impact they could have on Livingston County.

Community Health Status Assessment (CHSA) provided quantitative information regarding the health and quality of life of Livingston County residents and answered the questions “How healthy is our community?” and “What is the current health status of the community?” Using a variety of data sources the results of the CHSA provided a foundation for assessing and determining health issues within the community, as well as distinguishing where the community stands in relation to peer communities and state and national data.
Phase 4: Identify Strategic Issues

The fourth phase of the MAPP process identified strategic issue areas that represent critical challenges that must be addressed, as well as opportunities to be capitalized on, in order for Livingston County to achieve its vision. Between June and July 2015 the MAPP Team reviewed and analyzed the data gathered from the four assessments conducted during Phase Three of the MAPP process to identify ten strategic issues and prioritize them in impact order, as displayed below.

1. Substance Abuse
2. Health Education / Promotion
3. Mental Health
4. Healthcare Integration
5. Communication
6. Dental Health
7. Chronic Disease
8. Transportation
9. Affordable Housing
10. Sexually Transmitted Diseases / Infections

Phase 5: Formulate Goals and Strategies

During the August and September 2015 meetings the MAPP Team formulated goals and strategies to address the previously identified strategic issues. With community input via survey, the MAPP Team developed goal statements related to each of the ten strategic issues and generated potential strategies for achieving each goal. Together the formulated goals and strategies provided a connection between the current reality of what the local public health system and community’s health looks like now and the vision of what the local public health system and community’s health will ideally look like in the future. Additionally, a call was put out to all MAPP participants to be Strategic Issue Champions. Once a Strategic Issue Champion was selected for each strategic issue, the goals and strategies developed by the MAPP Team were further refined, and objectives, activities, and timelines were developed to form a draft work plan.

Phase 6: The Action Cycle

During the Action Cycle, the local public health system plans, develops, and implements the work plans developed to address the strategic issues. The Action Cycle seeks to answer the questions such as, “What will be done to realize the community’s vision?”, “Who will do it?”, “How will it be done?”, and “How will we know if improvements have been made?” Phase Six began with the November 2015 MAPP Team meeting and recognized the MAPP Team participants’ commitment and dedication to improving the health and quality of life of Livingston County. Additionally, during this meeting a Steering Committee was formed, as well as Action Teams for each strategic issue. The Action Teams, led by the Strategic Issue Champions, were responsible for reviewing and formally adopting the strategic issue work plans developed during the previous phase and will begin to implement strategic issue activities. Together, the ten strategic issue work plans form the 2015-2020 Livingston County CHIP. Activities related to the Action Cycle will continue through 2020.
Strategic Issue: Substance Abuse

Background
According to Healthy People 2020 “substance abuse has a major impact on individuals, families, and communities. The effects of substance abuse are cumulative, significantly contributing to costly social, physical, mental, and public health problems.” Among Livingston County residents 5.8%, 7.1%, and 3.0% reported having ever used prescription pain relievers, amphetamines, and tranquilizers, respectively, to get high in 2014 (Rusz, Kennedy, & Stork, 2014). Additionally, in 2014 10.0% of county residents reported heavy drinking and 26.6% reported binge drinking (Rusz, Kennedy, & Stork, 2014). In Livingston County, 33.7% of driving deaths from 2009-2013 involved alcohol impairment while driving compared to the 31.0% of driving deaths attributed to alcohol involvement for the same time period in the state of Michigan (University of Wisconsin Population Health Institute, 2015).

Alignment with State or National Initiatives
- Healthy People 2020 Substance Abuse Objectives
- Michigan’s Open Government Initiative: Health Behaviors – Excessive Alcohol Consumption Performance Indicator

Source / Evidence-Base
- National Prevention Strategy
  - Priority Area – Preventing Drug Abuse and Excessive Alcohol Use

Policy Implications
- Identify, monitor, advocate for, and support National and Michigan substance use and abuse-related legislative initiatives and agendas promoting substance use / abuse prevention and treatment.

Owner / Lead Agency or Group
- MAPP Substance Abuse Action Team
- Substance Use Disorder (SUD) Workgroup
**Goal Statement:** Through education and prevention, create an awareness in the community about the issues and realities of substance use disorders.

**Strategy:** Establish a comprehensive directory of prevention and treatment resources in many formats.

• Actively engage youth at the local level using STAND, SADD, and It Stops with Students to allow them to inform and inspire the campaigns within their communities. |
Strategic Issue: Health Education / Promotion

Background
A primary goal of Healthy People 2020 is to “increase the quality, availability, and effectiveness of education and community-based programs designed to prevent disease and injury, improve health, and enhance quality of life.” The results of the Livingston County MAPP Community Themes and Strengths Assessment indicated that the top three areas that Livingston County residents would like to receive more information and education on included wellness / disease prevention (39.6%), nutrition / diet (39.4%), and overweight / obesity (32.9%). Additionally, key stakeholders within the community identified the need for more educational opportunities about participating in healthy lifestyles / choices as an area to focus on to help Livingston County improve its health and quality of life (LCDPH, 2015).

Alignment with State or National Initiatives
- Healthy People 2020 Educational and Community-Based Programs Objectives
- Michigan Local Public Health Accreditation Program – Tool 2016
  - Section 1: Powers and Duties
    - MPR 1 – Indicator 1.4: A local health department shall plan, implement, and evaluate health education through the provision of expert technical assistance, or financial support, or both.

Source / Evidence-Base
- Core Competencies for Public Health Professionals
  - The Core Competencies for Public Health Professionals, developed through the recommendations of the Institute of Medicine and the Council on Linkages Between Academia and Public Health Practice, represent a set of desired skills for public health professionals that support, are compatible with, and endorse the need for an evidence-based public health approach to improving population health (Jacobs, Jones, Gabella, Spring, & Brownson, 2012).

Policy Implications
- Identify, monitor, advocate for, and support National and Michigan health promotion-related legislative initiatives and agendas promoting health promotion.

Owner / Lead Agency or Group
- MAPP Health Education / Promotion Action Team
- Livingston County Department of Public Health
Goal Statement: Improve the promotion of health education for all residents in Livingston County.

Strategy: Form a community wellness coalition.

Strategic Issue: Mental Health

Background
Healthy People 2020 has set a goal to “improve mental health through prevention and by ensuring access to appropriate, quality mental health services.” In Livingston County 20.2% of adults have reported being told by a doctor that they had a depressive disorder in 2014, with the likelihood of reporting such disorders increasing as age, as well as household income, decrease (Rusz, Kennedy, & Stork, 2014). Additionally, 17.1% of Livingston County residents reported needing services for mental health for themselves or a family member in 2014 (Rusz, Kennedy, & Stork, 2014).

Alignment with State or National Initiatives
- Healthy People 2020 Mental Health and Mental Disorders Objectives
- Michigan’s Open Government Initiative: Health Indicators - Attempted Suicide and Self-inflicted Injury Performance Indicator

Source / Evidence-Base
- National Prevention Strategy
  - Priority Area: Mental and Emotional Well-Being
    - Recommendation #3 – Provide individuals and families with the support necessary to maintain positive mental well-being.
    - Recommendation #4 – Promote early identification of mental health needs and access to quality services.

Policy Implications
- Identify, monitor, advocate for, and support National and Michigan mental health-related legislative initiatives and agendas promoting mental health support and treatment.

Owner / Lead Agency or Group
- MAPP Mental Health Action Team
- Livingston County Community Mental Health
**Goal Statement:** All persons living in our community shall have access to high-quality, affordable, and coordinated mental health care.

**Strategy:** Coordinate all private and public providers to do welcoming, appropriate, and effective referrals to care.

Strategic Issue: Healthcare Integration

Background
Healthy People 2020 has sought to “improve access to comprehensive, quality health care services” in order to achieve the best health outcomes. In Livingston County, residents identified that inadequate or lack of knowledge / information about health services / resources was the primary barrier to accessing health resources, social resources, and other resources within the county (LCDPH, 2015). Additionally, during the MAPP Local Public Health System Assessment it was identified that ensuring that individuals are aware of and linked to health services within the community was an area that should receive increased attention. The Healthcare Integration work plan focuses on improving communication, collaboration, and education of the health services available within Livingston County to improve access, health outcomes, and quality of life of county residents.

Alignment with State or National Initiatives
- Healthy People 2020 Access to Health Services Objectives

Source / Evidence-Based
- National Prevention Strategy
  - Priority Area: Clinical and Community Preventive Services
    - Recommendation #4 – Support implementation of community-based preventive services and enhance linkages with clinical care.
    - Recommendation #6 – Enhance coordination and integration of clinical, behavioral, and complementary health strategies.

Policy Implications
- Identify, monitor, advocate for, and support National and Michigan healthcare integration-related legislative initiatives and agendas promoting healthcare integration.

Owner / Lead Agency or Group
- MAPP Healthcare Integration Action Team
- St. Joseph Mercy Health System
- St. John Providence Health System
**Goal Statement:** Livingston County residents will be integrated into healthcare services.

**Strategy:** Develop a comprehensive list of providers within the community.

2. Research potential evidence-based models to use. | TBD | TBD | TBD | • More work is needed to define specifically the implementation activities for these strategies. LCDPH has access to look at multiple evidence-based models related to this item but needs more specificity which will be determined at a later in the process. | TBD |
Strategic Issue: Communication

Background

According to Healthy People 2020, the way individuals think about their health and health related behaviors are influenced by the way information is communicated to them. Improving communication between public health professionals and the general public can have a positive impact on Livingston County residents’ health decisions and actions. During the MAPP Phase 3: Local Public Health System Assessment, Health Communication was an essential public health service area identified as an area within the local public health system that needed increased attention, as it received a high priority ranking but exhibited a low performance score. Additionally, 52.9% of Livingston County residents reported that the primary barrier to accessing health and social services / resources available within the county was due to inadequate or a lack of knowledge about the services / resources. The Communication work plan seeks to improve communication efforts between the local public health system and the general public, as well as between public health system agencies within Livingston County.

Alignment with State or National Initiatives

- Healthy People 2020 Health Communication and Health Information Technology Objectives

Source / Evidence-Base

- National Prevention Strategy
  - Priority Area: Empowered People
    - Recommendation #1: Provide people with tools and information to make healthy choices.
- Healthy People 2020 Health Communication and Health Information Technology Objectives
  - Communication and information help to shape the way individuals and communities think about their health, behaviors, and well-being. According to Healthy People 2020, “health communication […] are central to health care, public health, and the way our society views health.” By “delivering accurate, accessible, and actionable health information that is targeted or tailored” through strategic health communication plans we can significantly impact county residents’ health decisions and actions.

Policy Implications

- The rich diversity of communicative practices and policy implications is rife with potential and opportunity. Policy opportunities and initiatives that mobilize the power of public health communication can “empower individuals to adopt healthy behaviors, direct policy makers’ attention to important health issues, and frame those issues for public [input] and resolution” (Center for Health Communication, 2015). Such opportunities must be considered when addressing not only the Communication Strategic Issue but how these opportunities apply to all ten Livingston County Strategic Issues.

Owner / Lead Agency or Group

- MAPP Communication Action Team
**Goal Statement:** Identify and utilize clear methods and processes for communicating and sharing information between community partners and the general public on a regular basis.

**Strategy:** Work with the Human Services Collaborative Body workgroup to identify consistent and common messages related to their respective issue areas and appropriate channels and methods for disseminating those messages.

Strategic Issue: Dental Health

Background
Healthy People 2020 states improving the accessibility of dental care for individuals is a priority area for our nation. Within Livingston County, there is one dentist for every 1,662 county residents, which is below the state of Michigan’s dentist to Michigan resident ratio of one to 1,485 (University of Wisconsin Population Health Institute, 2015). Additionally, 21.3% of Livingston County residents reported no dental visit within the past year. It was also found that those with lower incomes and those with no dental insurance were more likely to report no dental visit in the past year, compared to their higher income and insured counterparts (Rusz, Kennedy, & Stork, 2014).

Alignment with State or National Initiatives
- Health People 2020 Access to Health Services Objectives
- Michigan’s Open Government Initiative: Health Behaviors – Recent Dental Visits

Source / Evidence-Base
- According to the Michigan Governor’s recent Open Government Initiative, “good oral health […] is important to overall general health. There is increasing evidence that shows a relationship between oral health and physical health. Chronic diseases such as diabetes, heart disease and stroke may be [negatively] impacted by the lack of dental care.”

Policy Implications
- Identify, monitor, advocate for, and support National and Michigan dental health-related legislative initiatives and agendas promoting dental health, including dental insurance coverage.
- Healthy Michigan Plan expansion allowing for increased coverage of Michigan residents, including those in Livingston County.

Owner / Lead Agency or Group
- MAPP Dental Health Action Team
- Livingston County Department of Public Health
- VINA Dental
**Goal Statement:** Promote good oral health for all Livingston County residents.

**Strategy:** Launch a sustainable campaign to educate residents, the medical community, schools, churches, HHS, employers, senior center, etc. of the importance of good oral health and how to achieve it.

Strategic Issue: Chronic Disease

Background
“The degree to which we engage in unhealthy behaviors increases the risk of developing chronic diseases and reduces life expectancy” (State of Michigan, 2015). In Livingston County, chronic diseases represented seven of the ten leading causes of death in 2013. All together chronic diseases made up 926 of the 1,340 total deaths attributed to a leading cause of death in Livingston County in 2013 (Michigan Department of Health and Human Services, 2015). Additionally, 19.5% of Livingston County residents identified chronic diseases to be one of the top five most serious health issues in Livingston County by the MAPP Phase 3: Community Themes & Strengths Assessment.

Alignment with State or National Initiatives
- Michigan’s Open Government Initiative: Health Indicators – Leading Causes of Death (Chronic Disease Reduction)

Source / Evidence-Base
- CDC – Chronic Disease Prevention and Health Promotion
  - “Chronic diseases are responsible for 7 of 10 deaths each year” with many chronic disease conditions being among some of the most preventable health problems (Centers for Disease Control and Prevention, 2015). “Efforts to prevent disease, help people lead healthier lives, and end health disparities must include a focus on chronic disease” prevention and treatment. Chronic disease risk factors must be addressed at two levels, which includes the individual level through health behavior and health care interventions, as well as the population level promoting healthy environment and appropriate policies. (National Center for Chronic Disease Prevention and Health Promotion, 2015).

Policy Implications
- Identify, monitor, advocate for, and support National and chronic disease-related legislative initiatives and agendas promoting chronic disease prevention.

Owner / Lead Agency or Group
- MAPP Chronic Disease Action Team
- St. Joseph Mercy Health System
- St. John Providence Health System
**Goal Statement:** Prevent and reduce chronic disease in Livingston County

**Strategy:** Identify and reduce barriers to accessing preventative care and screening services for chronic disease.

Strategic Issue: Transportation

Background
Transportation was reported by 30.3% of Livingston County residents as one of the primary barriers to accessing health, social, and other services/resources in Livingston County in the MAPP Phase 3: Community Themes & Strengths Assessment. In the same report, key stakeholders within the community identified a lack of a “fully integrated transportation system within the county, as well as connecting to” surrounding communities as an area that is “not going so well” in Livingston County. The Transportation work plan seeks to improve transportation initiatives within Livingston County in order to improve the quality of life of county residents.

Alignment with State or National Initiatives
- Michigan’s Open Government Initiative: Mobility – Percentage Change in Passenger Rail Ridership Performance Indicator
- Michigan’s Open Government Initiative: Mobility – Percentage Change in Bus Ridership Performance Indicator

Source / Evidence-Base
- According to the Michigan Governor’s Open Government Initiative, “local bus service is vital to the state's transportation network, providing essential mobility for those who cannot or choose not to operate a vehicle and need to get to work, school, and the doctor or grocery store.”

Policy Implications
- Policy change to rescind the County Board’s authority over L.E.T.S. to allow for L.E.T.S. to become a transportation authority.
- Approval of resolution to allow the selling of advertisement space on L.E.T.S. buses.

Owner / Lead Agency or Group
- MAPP Transportation Action Team
- Livingston Essential Transportation Service (L.E.T.S.)
**Goal Statement:** LETS to become a transportation authority to allow for expansion and funding increase.

**Strategy:** Convince the County Board to rescind authority over LETS to allow LETS to become a transportation authority.

Strategic Issue: Affordable Housing

Background
Healthy and safe community environments, which include affordable and secure housing, can influence the health and wellness of those that live, learn, work, and play within the community (U.S. Department of Health & Human Services, 2011). The results of the MAPP Phase 3: Community Themes & Strengths Assessment identified that 33% of Livingston County residents reported that housing options available within the county “needed improvement”. This finding was also echoed by key stakeholders within the community during the same assessment, as they identified affordable housing as an area that was “not going so well” within the county.

Alignment with State or National Initiatives
- National Prevention Strategy: Healthy and Safe Community Environments

Source / Evidence-Base
- National Prevention Strategy
  - Priority Area: Healthy and Safe Community Environments
    - Recommendation #2 – Design and promote affordable, accessible, safe, and healthy housing.

Policy Implications
- Establish, communicate, and educate on necessary zoning changes.

Owner / Lead Agency or Group
- MAPP Affordable Housing Action Team
**Goal Statement:** Increase affordable housing units for young adults/starter families.

**Strategy:** Increase access to accessory dwelling units, townhomes, multi-unit homes, and mixed unit developments.

Strategic Issue: Sexually Transmitted Diseases / Infections

Background
According to Healthy People 2020, sexually transmitted disease (STD) “prevention is an essential primary care strategy for improving reproductive health.” STDs, while largely preventable, “remain a significant public health problem in the United States” (Healthy People 2020, 2015). A primary goal for Health People 2020 is to “promote healthy sexual behaviors, strengthen community capacity, and increase access to quality services to prevent STDs and their complications.” There were 155 reported chlamydia cases per 100,000 persons in Livingston County compared to 456 cases per 100,000 persons in the state of Michigan during 2014 (Michigan Department of Health and Human Services, 2015). While Livingston County’s chlamydia rate was lower than the statewide rate, chlamydia accounts for roughly a quarter of all individually reported conditions in Livingston County. Additionally, Livingston County has seen an increase in the number of reported chlamydia cases. From 2005-2009 the average number of cases reported per year was 158 with the average number of reported cases per year increasing to 270 between 2010-2014. Livingston County has also seen an increase in the number of reported cases for males and females 15-19 years of age, with 73 and 97 cases for 2013/2014 and 2014/2015, respectively, as well as for females 20-44 years of age with 142 cases reported for 2013/2014 and 150 cases for 2014/2015 (Michigan Department of Health and Human Services, 2015).

Alignment with State or National Initiatives
- Healthy People 2020 Sexually Transmitted Diseases Objectives
- Michigan Local Public Health Accreditation Program (Tool 2016) – Section VII: HIV/AIDS & STD
  - Categorical Funding
    - MPR 6 – Establish, maintain and document linkages with health care and other community resources that are necessary and appropriate for the prevention and control of HIV and other STDs; and for addressing the prevention and care needs of clients receiving HIV and STD services.
  - Low Morbidity Health Departments
    - MPR 4 – Establish, maintain and document linkages with health care and other community resources that are necessary and appropriate for the prevention and control of HIV and other STDs; and for addressing the prevention and care needs of clients receiving HIV and STD services.
    - MPR 5 – Provide quality assured and evidence-based HIV and STD prevention and treatment services.
- Michigan’s Open Government Initiative: Health Behaviors – Sexually Transmitted Diseases (Chlamydia) Performance Indicator

Source / Evidence-Base
- “STD prevention is an essential primary care strategy for improving reproductive health” and preventing long-term health consequences (Healthy People 2020, 2015).
Expedited Partner Therapy (EPT) is currently recognized as a best-practice method “to facilitate partner management” for treatment of partners with a sexually transmitted disease / infection and “should be available to clinicians as an option for partner treatment” (Centers for Disease Control and Prevention, 2015).

**Policy Implications**
- Identify, monitor, advocate for, and support National and Michigan STD-related legislative initiatives and agendas promoting STD prevention and treatment.
- Recently (January 2015) EPT was signed into law allowing for physicians to prescribe treatment via EPT. Policy opportunities and initiatives should promote, support, educate, and facilitate the use of EPT throughout Livingston County.

**Owner / Lead Agency or Group**
- MAPP Sexually Transmitted Diseases / Infections Action Team
- Livingston County Department of Public Health

**Goal Statement:** Reduce the incidence of sexually transmitted infections among Livingston County residents through accessible prevention and treatment services.

**Strategy:** Increase awareness of available services in the community.
